## DETAILED ACTION

### *Status of the Application*

This Office Action is in response to applicant's election filed on 11/3/2005.

Claims 1-15 are pending. Claims 4-5, 8-15 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 11/3/2005. The requirement is deemed proper and is therefore made FINAL.

Claims 1-3, 6-7 are examined herein.

### *Double Patenting*

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-2 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1 and 5 of copending Application No. 10/624,609. Although the conflicting claims are not identical, they are not patentably distinct from each other because application 10/624,609 claim a

Art Unit: 1617

method of treating acute maxillary sinusitis of fungal origin with an azole antifungal agent selected from the group consisting of fluconazole, voriconazole, and itraconazole.

Claims 1-2, 6 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-2, 4-6 of copending Application No. 11/018,312. Although the conflicting claims are not identical, they are not patentably distinct from each other because application 11/018,312 claim a composition comprising an antifungal agent, particularly itraconazole, caspofungin, and amphotericin B, with an antibacterial agent.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3, 6-7 are rejected under 35 U.S.C. 102(b) as being anticipated by Ponikau et al. (US Patent 6,207,703 B1).

Ponikau et al. teach a method of treating non-invasive fungus-induced mucositis, such as chronic otitis media, by administering an antifungal formulation (abstract). This formulation can contain a cocktail of antifungal agents along with additional ingredients such as antibacterial agents (col. 26, lines 10-29). One particular formulation calls for a

Art Unit: 1617

combination of an antifungal agent (col. 42, lines 56-61) and an antibacterial agent (col. 44, lines 44-53). Preferred antifungal agents include amphotericin B, itraconazole, saperconazole, and voriconazole (col. 43, lines 39-42). Furthermore, this formulation may be administered as an ear drop (col. 28, lines 41-44).

Examiner respectfully reminds applicant that the intended use of a composition has no patentable weight.

It is respectfully pointed out that a recitation of the intended use of the claimed invention must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish from each other. If the prior art structure is capable of performing the intended use, then it meets the claim. In a claim drawn to a process of making, the intended use must result in a manipulative difference as compared to the prior art. See *In re Casey*, 152 USPQ 235 (CCPA 1967) and *In re Otto*, 136 USPQ 458, 459 (CCPA 1963). Thus, the intended use of a composition claim will be given no patentable weight.

It is further respectfully pointed out that a preamble is generally not accorded any patentable weight where it merely recites the purpose of a process or the intended use of a structure, and where the body of the claim does not depend on the preamble for completeness but, instead, the process steps or structural limitations are able to stand alone. See *In re Hirao*, 535 F.2d 67, 190 USPQ 15 (CCPA 1976) and *Kropa v. Robie*, 187 F.2d 150, 152, 88 USPQ 478, 481 (CCPA 1951). See MPEP 2111.02.
